

**Massachusetts Informational Disclosure Label
Harborside Energy of Massachusetts, LLC.**

Generation Price Average Price per kWh at different levels of use. Prices do not include regulated charges for customer service and delivery.	The price you pay is specified your agreement with Harborside Energy of Massachusetts, LLC. Please refer to your agreement for details on the specific price you pay. If you have questions on your bill, please call us at the number listed below.
---	--

Contract	Your contract term is as specified in your agreement with Harborside Energy of Massachusetts, LLC. Please refer to your agreement on the specific length of your term. If you have questions on your agreement, please call us at the number listed below.
-----------------	--

Power Sources Represents the Residual System Mix as reported in NEPOOL GIS System Public Reports for the period of 4/1/2020 to 3/31/2021.	Fuel	Pct %	Power Sources: The electricity you consume comes from the New England power grid, which receives power from a variety of power plants and transmits the power throughout the region as needed to meet the requirements of all customers in New England. When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Known Resources include resources that are owned by, or under contract to, the supplier. System Power represents power purchased in the regional electricity market. Biomass refers to power plants that are fueled by wood or other plant matter. Hydro resources of greater than 30 megawatts in size are deemed "large hydro." All other hydro resources are deemed "small hydro." Other Renewables include fuel cells utilizing renewable fuel sources, landfill gas, and ocean thermal.
	Biogas	0.00	
	Biomass	0.01	
	Coal	0.18	
	Diesel	0.74	
	Digester gas	-	
	Efficient Resource (Maine)	0.00	
	Energy Storage	0.04	
	Fuel cell	0.02	
	Hydroelectric/Hydropower	0.26	
	Import System Mix	24.37	
	Jet	0.02	
	Landfill gas	0.00	
	Municipal solid waste	0.19	
	Natural Gas	55.10	
	Nuclear	11.36	
	Oil	7.05	
Solar Photovoltaic	0.53		
Trash-to-energy	0.08		
Wind	0.04		
Wood	0.02		
Total	100.00		

Air Emissions Source: NEPOOL GIS Public Reports - System Mix for the period of 4/1/2020 to 3/31/2021	Type	New England System Average lb/MWh	Air Emissions: Emissions for each the following pollutants are presented from ISO New England System Mix Report . Carbon Dioxide (CO) is released when fossil fuels (e.g., coal, oil and natural gas) are burned. 2 Carbon dioxide, a greenhouse gas, is a major contributor to global warming. Nitrogen Oxides (NOX) form when fossil fuels and biomass are burned at high temperatures. They contribute to acid rain and ground-level ozone (or smog), and may cause respiratory illness in children with frequent high level exposure. NOX also contribute to oxygen deprivation of lakes and coastal waters which is destructive to fish and other animal life. Sulfur Dioxide (SO) is formed when fuels containing sulfur are burned, primarily coal and oil. 2 Major health effects associated with SO include asthma, respiratory illness and aggravation of 2 existing cardiovascular disease. SO2 combines with water and oxygen in the atmosphere to form acid rain, which raises the acid level of lakes and streams, and accelerates the decay of buildings and monuments.
	NOx	0.76	
	SO ₂	0.43	
	CO ₂	768.19	

Labor Information Source: NEPOOL GIS Public Reports Certificate Statistics for 4/1/2020 to 3/31/2021. NEPOOL Net Energy & Peak Load	Output MWh	Pct of Total	Labor Data: The information on this label regarding whether generators or suppliers operate under collective bargaining agreements is provided to inform you about whether the energy was produced in plants where employee wages and working conditions are mutually determined by employees and management, and protected by union contracts. The information on this label regarding the use of replacement employees during a labor dispute is provided to inform you of whether or not a generator or supplier during a strike by or lock-out of its employees has replaced them with other workers.	
	Generation workforce with Union Labor	26,234,418		22.30%
	Generation workforce without Union Labor	91,427,582		77.70%
	Total Generation	117,662,000		100.00%
